

GEOBRUGG MESH

Geobrigg Mesh – is a $\varnothing 3\text{mm}$ steel wire, single twisted into meshes in the shape of rhomboids (Diamonds) that offer a great deal of flexibility in all directions.

The edges are single twisted and spun back on themselves to prevent unravelling (see Figure 1).

The Geobrigg Mesh is supplied in rolls as per customer requirements and widths of 1,2m or 3.9m or m^2 as per customer requirement.

The mesh is connected together using the Connection Clip (Figure 2).
